## Software Program - File List

### Analog-to-Digital (\*A2D) Files (130)

A2D files contain the actual analog-to-digital values collected from the National Instruments hardware during a test. The files contain the header described above and the Analog-to-digital values. The structure of an A/D scan is:

<Scan 1, channel 1>< Scan 1, channel 1, channel 3>...  
 <Scan 2, channel 1>< Scan 2, channel 2, channel 3>...  
 Etc...

Each scan is stored in a two byte word in little endian format.

### Voltage (\*.DAT) Files (132)

DAT files contain the voltage data from a test, after it has been converted from A/D values to voltages and signal conditioning filters have been applied. The files contain the header described above followed by the voltage values. The Format is:

<Scan 1, channel 1><Scan 1, channel 2><Scan 1, channel 3>...  
 <Scan 2, channel 1><Scan 2, channel 2><Scan 2, channel 3>...  
 etc...

Each scan is stored as an IEEE double floating point value.

### RMS (\*.RMS) Files (134)

RMS files contain the RMS values of the differences between the voltage waveforms of adjacent electrodes. During display of an RMS file, the values can then be mapped to colors, and displayed as colored line segments. The files contain the header described above by the RMS information.

The RMS voltage differences is calculated for each pair of adjacent electrodes. The row and column position of each of the two electrodes are also stored.

First electrodes' row number  
 First electrodes' column number  
 Second electrodes' row number  
 Second electrodes' column number  
 RMS values

The following information about the RMS values is also stored:

Minimum RMS value in scan  
 Maximum RMS value in scan  
 Total number of adjacent electrodes pairs
